Routledge Handbook of Planning and Management of Global Strategic Infrastructure Projects

Scientific and Technical Aerospace Reports

A number of public enterprise (PE) executives have long felt the need for a book which would provide necessary information and analysis of various dimensions of PE management and privatisation. The book provides at one place, a precise and authoritative account of the concept, policy, and analysis of major issues confronting PEs. Public ownership per se does not make PE performance sub-optimal. The operation of the Government system, of which PE is a sub-system, has not been conducive to performance. During the last six decades, inadequate political will and vested interests have come in the way of freeing PEs from excessive and throttling controls, and demoralising accountability. Not letting the managers manage with the freedom required in the liberalised and globalised set-up is the problem. The multifarious and complex managerial problems of PEs, which get compounded by faltering moves towards privatisation, cannot be wished away. These have been considered in the book at some length. The book, first published in 1980, continues to be a standard work on the subject. This latest edition has been revised by Dr. R.K. Mishra, Director, Institute of Public Enterprise, Hyderabad.

Public Works for Water and Power Development and Energy Research Appropriations for Fiscal Year 1977

Biannually since 1994, the European Conference on Product and Process Modelling in the Building and Construction Industry has provided a review of research, given valuable future work outlooks, and provided a communication platform for future co-operative research and development at both European and global levels. This volume, of special interest to

Public Works for Water and Power Development and Energy Research Appropriations for Fiscal Year

This report presents a comprehensive assessment of the policy instruments adopted by the Netherlands to reach carbon neutrality in its manufacturing sector by 2050. The analysis illustrates the strength of combining a strong commitment to raising carbon prices with ambitious technology support, uncovers the pervasiveness of competitiveness provisions, and highlights the trade-off between short-term emissions cuts and longer-term technology shift.

Project Management for Construction

Code of Federal Regulations

This work provides principles & techniques for the evaluation of construction design, emphasizing the importance of strong analysis skills & exploring estimation. It aims to provide readers with a balanced & cohesive overview of these two areas.

Public Enterprise Management And Privatisation

This book provides a unique guide to value management and sustainability in construction to researchers and professional. The book provides a better understanding of the concept of value management, the basis of sustainable construction and thereafter, demonstrates how using the principles of value management can help to achieve successful construction projects that are financially viable, socially beneficial and do not damage the environment. The book serves as an introduction to value management for scholars and researchers at all levels; and also as a practical guide for construction professionals, employers and other stakeholders in the construction industry.

This book examines complex challenges in managing major strategic economic and social infrastructure projects. It is divided into four primary themes: value-based approach to infrastructure systems appraisal, enabling planning and execution, financing and contracting strategies for infrastructure systems and digitising major infrastructure delivery. Within these four themes, the chapters of the book cover: the value and benefits of infrastructure projects planning for resilient major infrastructure projects, sustainable major infrastructure development and management, including during mega events, improving infrastructure project financing, stakeholder engagement and multi-partner collaborations, delivering major infrastructure projects effectively and efficiently, whole-life-cycle performance, operations and maintenance, relationship risks on major infrastructure projects, public-private partnerships, design thinking principles, and innovation and technology. By drawing on insights from their research, the editors and contributors bring a fresh perspective to the transformation of major strategic infrastructure projects. This text is designed to help policymakers and investors select and prioritise their infrastructure needs beyond the constraining logic of political cycles. It offers a practical set of recommendations for governments on attracting private capital for infrastructure projects while creating clear social and economic value for their citizens. Through theoretical underpinning, empirical data and in-depth informative global case studies, the book presents an essential resource for students, researchers, practitioners and policymakers interested in all aspects of strategic infrastructure planning, project management, construction management, engineering and business management.
